Section 11 - Date and Time
Quiz Answers

1.

```java
    LocalDateTime dateTime =
LocalDateTime.ofInstant(Instant.ofEpochMilli(System.currentTimeMillis(
)), ZoneId.of("America/Los_Angeles"));
        String day = dateTime
                    .plusYears(1000)
                    .getDayOfWeek()
                    .getDisplayName(TextStyle.FULL,
Locale.getDefault());

        System.out.println(day);
```

2.

LocalDate just handles dates (days, months, years) while LocalTime handles smaller units of time (minutes, seconds, hours).

3.

```java
    public static LocalDateTime convertTime(LocalDateTime pst)
    {
        ZonedDateTime dateTime = ZonedDateTime.of(pst,
```

```java
        ZoneId.of("America/New_York"));
            return dateTime.toLocalDateTime();
    }
```
